Abstract of the Disclosure

The invention disclosed consists of an Internet scale, which is comprised of a weighing platform with an integrated Internet connection/browser means. This scale will allow the connectivity and communication with the Internet or Intranet without the use of a separate Internet connection means. It will have the ability to take a weight from a weighing apparatus, update an HTML form automatically with the new weight value and obtain the new charge/cost for the specified method of shipment from an Internet server. The Internet scale will act as an Internet appliance and perform communication with the Internet and peripherals required for a small footprint shipping system.
